Allowable Subject Matter

2. **Claims 1, 2 and 4-31** are allowed.
3. **Claims 1, 2 and 4-31** are renumbered.
4. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowed because the closest prior art, Bohannon et al. (U.S. Patent No. 4,956,999) fails to anticipate or render obvious a signal estimation method for estimating a time-varying signal carrying information about a load on a part or a response to the load on the part, including the steps of: obtain at least one mode amplitude based upon a map of a relationship between said at least one input state parameter and said at least one mode amplitude; and obtain a signal portion from said at least one mode amplitude and at least one respective mode shape; and constructing the estimated signal using said signal portion, in combination with the rest of the claim limitations as claimed and defined by the Applicant.

Claim 9 is allowed because the closest prior art, Bohannon et al. (U.S. Patent No. 4,956,999) fails to anticipate or render obvious a signal estimation method, the method including the steps of obtaining at least one estimated variable feature from said at least one input state parameter via a feature estimation model, wherein the feature estimation model maps relationships between the at least one state parameter and at least one variable feature; and constructing an estimated signal from said at least one estimated variable feature and at least one fixed feature, in combination with the rest of the claim limitations as claimed and defined by the Applicant.

Claim 19 is allowed because the closest prior art, Bohannan et al. (U.S. Patent No. 4,956,999) fails to anticipate or render obvious a method of generating a signal estimation model, the method including the steps of obtaining at least one state parameter during the same operation conducted for the step of obtaining of the actual signal; extracting at least one fixed feature and at least one variable feature from the actual signal; constructing a variable feature estimation model that maps said at least one variable feature by said at least one state parameter in the feature estimation model; and constructing a synthesis model that synthesizes an estimated signal from the at least one variable feature obtained using the feature estimation model and at least one fixed feature, in combination with the rest of the claim limitations as claimed and defined by the Applicant.

Claim 28 is allowed because the closest prior art, Bohannan et al. (U.S. Patent No. 4,956,999) fails to anticipate or render obvious a load estimation system for estimating at least one of a load on a part and a response to a load, comprising a memory that stores a model coefficients library and a mode shape library, wherein the model coefficients library is part of an estimation model that maps a relationship between at least one input state parameter and at least one mode amplitude; and a processor that receives said at least one input state parameter, obtains said at least one mode amplitude corresponding to said at least one input state parameter, and constructs an estimated load signal from said at least one mode amplitude and at least one mode shape taken from the mode shape library.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
